

### **Polyester Overlamine Product Performance Guideline**

Qspac polyester overlaminates are rated for 5-year interior and exterior print protection and durability and suitable for over-lamination on a variety of substrates and ink technologies.

Use of overlamine is recommended to prevent abrasion of ink, extend color fastness, and for ease of handling.

For optimum performance, allow inks to cure for 24-48 hours before laminating.

Overlamine should be tested for suitability with media and final use application.

Overall product performance may be limited based upon media used in final graphic applications.

### **Product Performance Statement**

Product applications using Qspac polyester overlaminates will remain in good condition without excessive fading. The polyester overlamine will protect and extend the durability of most ink technologies when correctly stored, printed, and applied.

Qspac will not be liable for any indirect or consequential loss or damage of final product application, and will not provide allowances for misuse or misapplication of the product.

Product performance information is presented in good faith to the best of our knowledge regarding the performance of the product.

The purchaser should consider the suitability of all products for its intended end use and the purchaser assumes all risks in connection with final use application. Seller shall not be liable for damages in excess of purchase price of the product.

If product fails within the intended time frame of product performance and is deemed to be defective, the manufacturer reserves the right to offer product replacement and will at its own discretion make commercial decisions regarding consequential damage relief.
